

# CONFIGURE THE WIRED OR WIRELESS NETWORK SETTINGS FOR LG WEBOS WP400 MEDIA PLAYER

In this manual we will provide you with a step-by-step guide on how to configure or change your wired (LAN) or wireless (WLAN) network settings. Please have the LG remote control ready.

1. Turn on the LG webOS WP400 media player and wait until it has fully booted.
2. Press the **Settings** button on the remote control (*gear-icon*).
3. Use the arrow keys on the remote control to navigate to **General**.
4. Press the -> **arrowkey** to enter the General menu. Navigate to **Network** and press **OK**.
- 5.

6. Select your wired (LAN) or wireless (WLAN) **connection** and press **OK** to confirm.
7. For wireless (WLAN) select your wireless connection in the list and press **OK**.
8. Enter the password and select **Connect** to confirm. An IP address will now be issued from the network and a message will appear that an internet connection is available.
9. Finally, restart your LG webOS WP400 media player and wait until the ZetaDisplay application is running.
10. Congratulations! You should now have a working wireless internet connection.

## How to check the connection status?

When our software is running, you can press the blue button on the remote control to open the ZetaDisplay information screen.

Check the status below **Network**. There should be:

- Type of connection (Wired or Wireless)
- IP address and [MAC address]
- Status (online or offline)

### Network

Wired IP Address: 192.168.1.1 [00:01:02:03:04] - Online
